Welcome To Our Application

Our Flood-Warning App helps keep people safe by providing real-time alerts about floods and information on affected areas.

Menu Display

01

Simple and Quick Navigation

The homepage is designed to give users quick and easy access to all main features. The navigation bar at the bottom is fixed and available on every screen, allowing seamless switching between sections.

02

Key Features Front and Center

The core features – Map, Statistics, and News – are prominently displayed in the center of the homepage. Users can instantly check flood-affected areas, analyze real-time water levels, and scroll through updates.

03

Real-Time Location and Flood Status

At the top of the screen, users can see their current location and the flood risk status (High/Medium/Low) in real time. This ensures that the most critical information is visible immediately.

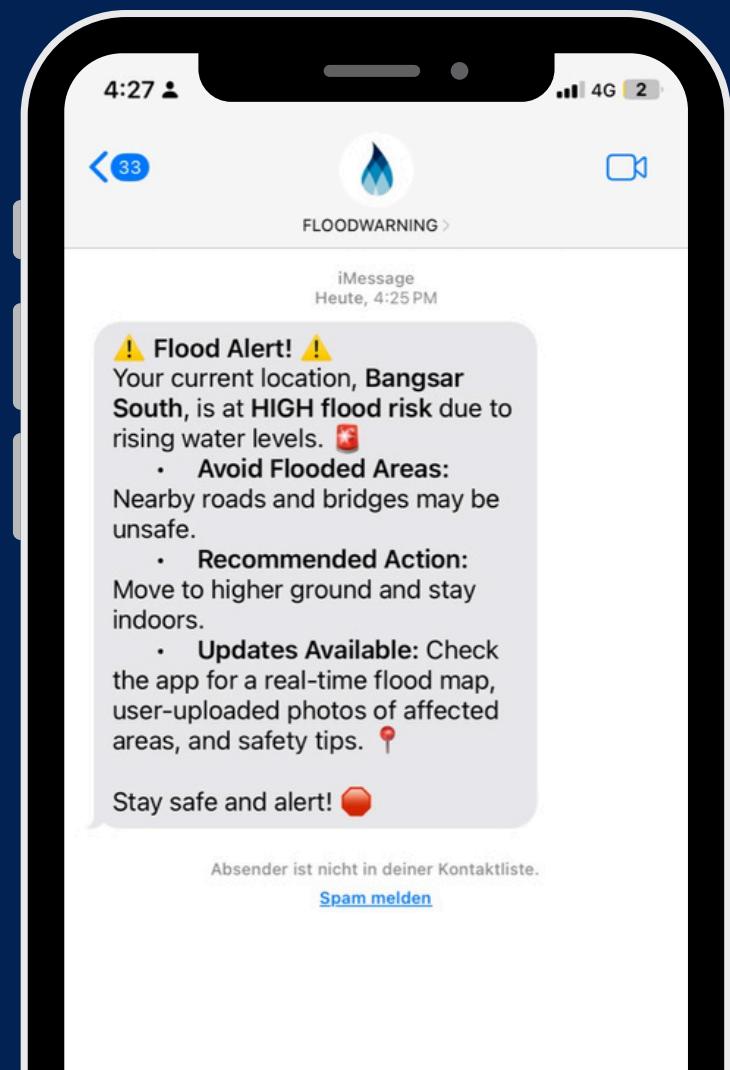

Application Features

01

Real-Time Flood Alerts

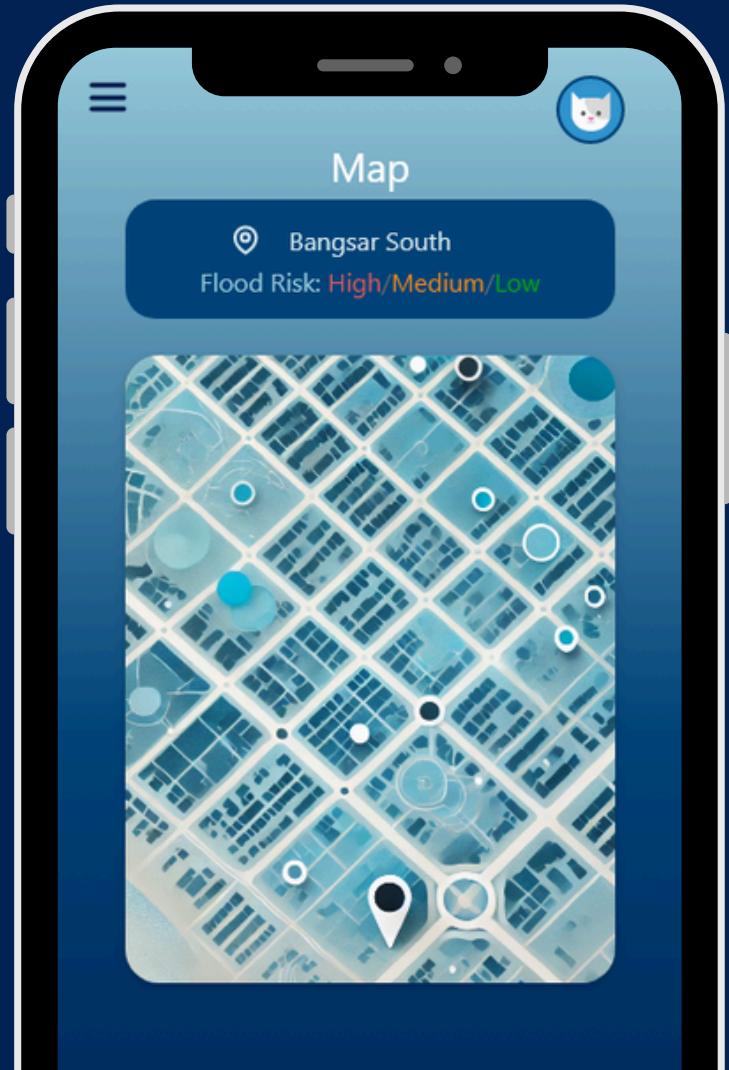

Instant SMS notifications are sent when the user's current location is at flood risk.

02

Interactive Flood Map

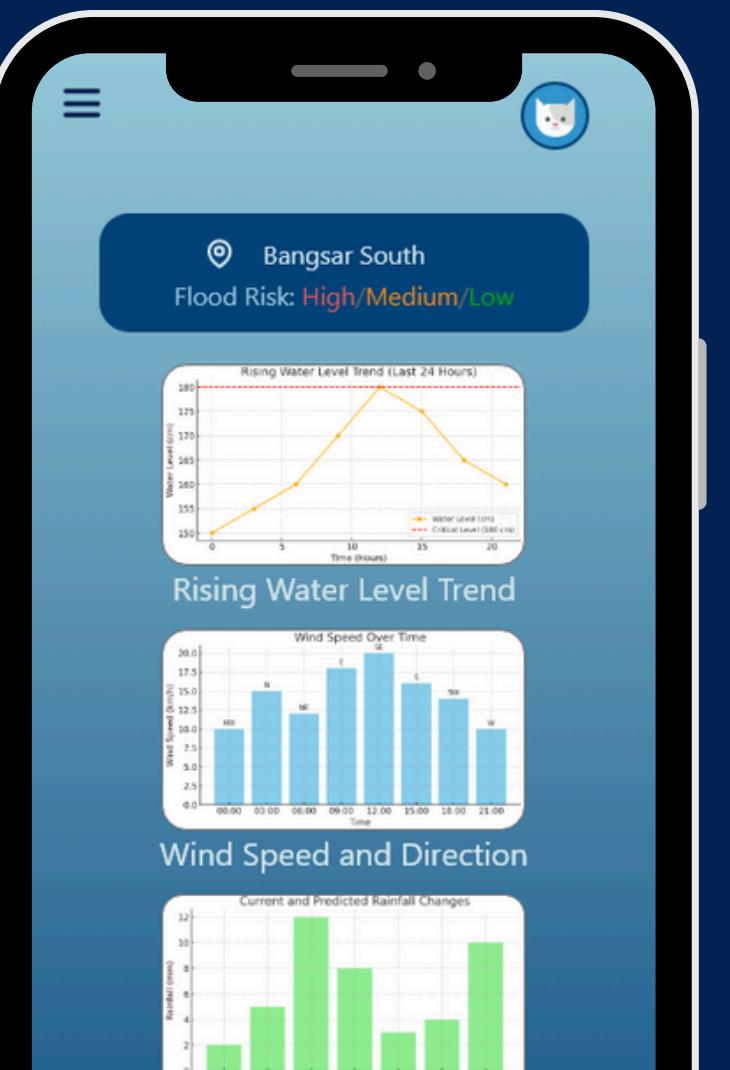

An interactive map highlights affected areas and allows users to upload photos with locations to warn others about unpassable roads or bridges.

03

Statistical Analysis

Detailed weather data and real-time river water levels, including how much they exceed normal levels.

04

Newsfeed

A scrollable feed with up-to-date articles about floods and safety measures – similar to Instagram.

Application Advantages

01

Real-Time Flood Alerts

Users receive instant notifications about flood risks at their current location, ensuring they can take immediate action to stay safe.

02

Interactive Flood Map

The map highlights affected areas and allows users to upload photos with locations, helping the community identify blocked roads or dangerous zones quickly.

03

Easy Navigation

A fixed bottom navigation bar allows users to seamlessly switch between key features like the map, statistics, and newsfeed without delay.

02

Detailed Statistics

Users can monitor real-time weather conditions and river water levels, including deviations from normal levels, to plan ahead effectively.

04

Community Updates

The newsfeed provides a scrollable platform for articles and updates, keeping users informed about flood developments and safety tips in their area.

06

User-Friendly Design

The app features a clean and intuitive interface, allowing users of all ages to quickly access critical information and navigate seamlessly through all features.
